FEATURES

ROOSFIT

Ein zu klein gewählter Schuh kann das Wachstum der Füße bei Babys und Kleinkindern negativ beeinflussen. Um genau das zu verhindern und Eltern bei der Auswahl der passenden Größe für den Nachwuchs zu unterstützen, wurde das ROOSfit-System entwickelt. Das von KangaROOS konzipierte System hilft Eltern über die eigene Einschätzung hinaus bei der zuverlässigen Messung am Fuß des Kindes. Und auch nach dem Schuhkauf zeigt die herausnehmbare ROOSfit-Sohle an, wann die Zeit für ein neues Paar KangaROOS gekommen ist. Damit ist ein hoher Tragekomfort auch für die Jüngsten garantiert. Befindet sich der Fuß im roten Bereich, ist der Schuh zu klein. Ist der Fuß in der grünen Zone, so passt er optimal.

A shoe that was chosen too small can influence the growth of a baby's feet. The KangaROOS system ROOSfit was developed to help parents to find the right size for their children. With ROOSfit you get a reliable measurement of childrens' feet. Also after wearing the shoes the removable insole shows you when it's time for a new pair of KangaROOS. Because of that a higher wearing comfort also for the youngest is guaranteed. If the foot is in the red section the shoe is too small. If the foot is in the green zone the shoe fits perfect.

ROOSTEX

ROOSTEX®

WATERPROOF – WINDPROOF – BREATHABLE

ROOSTEX – DIE KLIMAZONE FÜR IHRE FÜSSE!

ROOSTEX ist eine wasser- und winddichte Membran, die durch ihre spezielle, neuartige Struktur zudem atmungsaktiv ist. Sie besteht aus einer speziell entwickelten Schicht aus Purem PE. Ihre Mikrostruktur ermöglicht das Entweichen der körpereigenen Ausdünstung in Form von Wasserdampf und verhindert gleichzeitig das Eindringen von Wassertropfen in das Schuhinnere. Diese Konstruktion umschließt den ganzen Fuß wie eine Socke und erzeugt ein angenehmes Körperklima, denn der Schuh ist vollkommen wasser- und winddicht und bleibt atmungsaktiv!

DAS SPEEDLACE-SCHNÜRSYSTEM ist optimal geeignet für alle bewegungsintensiven Aktivitäten. Durch Aufschrauben des Endstückes ist das Schnürsystem individuell in der Länge kürzbar. Somit können keine überschüssigen Laces die Bewegungsfreiheit beeinträchtigen und eine optimale Passform am Fuß ist garantiert. Kein zeitraubendes Binden – einfach zuziehen und los!

THE AIR CONDITION FOR YOUR FEET!

ROOSTEX is a high-tech product with the functionality of a water-resistant membrane consisting of a specially developed layer of Pure PE. These micro structures allow sweat to evaporate and at the same time prevent water to enter. This construction covers the foot like a sock and creates a comfortable body climate. The shoe is totally water and wind resistant but is nevertheless still breathable!

THE SPEEDLACE LACING SYSTEM is ideal for all movement-intensive activity. By unscrewing the end piece, each lace can be adjusted in length. This guarantees optimum fit on the foot, and that no excess laces impair freedom of movement. No time-consuming tying – just PULL on and go!

MEMORY FOAM

Memory Foam bettet deine Füße auf eine weiche, anpassungsfähige Sohle, die sich durch ihre hohe Rückstellkraft auszeichnet. So tritt sich das Fußbett nicht aus.

Memory Foam embeds your feet on a soft, flexible sole that's highly resilient – so the footbed doesn't wear out.

KANGACUSH

Top-Dämpfung

KangaCUSH besticht durch einen sehr guten Tragekomfort und herausragende Dämpfungseigenschaften. Zudem ist die softe **KangaCUSH**-Sohle sehr leicht.

Top-Cushioning

KangaCUSH combines a high level of wearing comfort with excellent cushioning characteristics. The soft **KangaCUSH** outsole is very light.

ORTHOLITE

Ortholites fortschrittliche Einlagen-Technologie bietet eine bislang unerreichte Kombination von Vorteilen.

Atmungsaktiv

Luft zirkuliert in und um die Einlage, was den Fuß kälter und trockener hält.

Dochtwirkung

Die einzigartige Struktur der Einlage leitet Feuchtigkeit vom Fuß weg.

Strukturstabil

Anders als Einlagen von Mitbewerbern wird Ortholite nicht mit der Zeit flach gedrückt sondern behält 95% ihres Volumens durch die einzigartige Rückfederung.

Antimikrobiell

Der patentierte Materialmix bekämpft Pilze, Bakterien und Gerüche.

Leichtigkeit

Die Einlagen bieten Polsterung und optimale Leistung ohne den Schuh schwerer zu machen.

Waschbar

Einfach die dreckigen Einlagen in die Waschmaschine werfen, und sie sind wieder wie neu.

Ortholite advanced insole technology delivers a combination of benefits unmatched by any other insole manufacturer.

Breathable

Air circulates in and around the insole, leaving the foot cooler and drier.

Moisture Wicking

Unique insole structure moves moisture away from your foot.

Retains Structure

Unlike many of the insoles on the market that go flat, unique spring-back technology ensures your insole will retain more than 95% of its thickness over time.

Antimicrobial

Patented formulation fights fungus, bacteria and odor.

Lightweight

Insoles provide cushioning and optimum performance without adding weight to the shoe.

Washable

Just throw your dirty insoles in the washing machine and they come out like new.

- 1 **Was ist WMS?**
WMS ist ein Weitenmaßsystem für passgerechte Kinderschuhe und sorgt seit mehr als 40 Jahren dafür, dass Kinderfüße gesund groß werden. WMS ist das Qualitätssiegel für Kinderschuhe im Deutschen Schuhinstitut (DSI). Die Lizenz, die an qualifizierte Schuhhersteller vergeben wird, hält der HDS – Bundesverband der Schuhindustrie e.V.
- 2 **WMS berücksichtigt neben der Länge auch die Ballenbreite der Füße.**
Kinderschuhe nach WMS zeichnen sich durch eine exzellente Passform aus. Neben der Länge berücksichtigen sie unterschiedliche Weiten. Das WMS-System unterscheidet für jede Länge drei Weiten: W = weit (für breite Füße), M = mittel (für mittelkräftige Füße), S = schmal (für schlanke Füße). Durch den Einsatz von WMS Fußmessgeräten wird eine kombinierte Größe aus Länge und Weite ermittelt. Die Schuhlänge beinhaltet eine Zugabe zum Abrollen und als Wachstumsreserve.
- 3 **WMS wird regelmäßig den neuesten (biomechanischen) Forschungsergebnissen angepasst.**
Der erste deutsche Kinderfuß-Report fasst die Ergebnisse der neuesten wissenschaftlichen Fußmessstudie, durchgeführt von der Universität Potsdam, an über 20.000 Kinderfüßen, zusammen.
- 4 **WMS Schuhe ermöglichen ein gesundes Wachstum der Kinderfüße.**
Das Ziel von WMS ist es, für alle Kinder passende Schuhe anzubieten. Durch genaue Vorgaben zu Länge, Weite und Spitzengestaltung bietet WMS die perfekten Voraussetzungen, unterschiedlichste Füße mit den richtigen, passenden Schuhen zu versorgen und Fuß- und Gesundheitsschäden zu vermeiden.
- 5 **Welche Vorteile bietet WMS?**
WMS ist das Qualitätssiegel für passformgerechte und qualitativ hochwertige Kinderschuhe. WMS stellt einen hohen Qualitätsstandard für kinderfußgerechte Schuhe sicher. Die natürlichen Fußproportionen werden berücksichtigt, die Schuhmaße sind bei allen nach WMS produzierenden Herstellern identisch. Das WMS System steht bei Herstellern, Händlern und Kunden für höchstes Vertrauen und Verlässlichkeit. WMS ist seit über 40 Jahren ein anerkanntes, bewährtes System im Dienste der Fußgesundheits.
- 6 **WMS beruht auf dem Brandsohlenkonstruktionsschema der Deutschen Gesellschaft für Orthopädie.**
Die proportionale Aufteilung des Fußes wird bei der Erstellung von WMS-Schuhen anhand des Brandsohlenkonstruktionsschemas der Deutschen Gesellschaft für Orthopädie berücksichtigt, um eine ergonomische Passform zu erzielen.
- 7 **WMS-Schuhe haben eine Schubund Wachstumszugabe.**
Neben einer Wachstumszugabe beinhalten sie außerdem eine Längenzugabe, weil jeder Fuß beim Gehen ein Stück nach vorne schiebt. Die Länge passender Kinderschuhe ist: Fußlänge (Stehen) + Bewegungsraum + Wachstumsreserve.

What is WMS?

WMS is a girth measurement system for children's shoes that fit and has helped children's feet to grow healthily for more than 40 years. WMS is the quality seal for children's shoes in the German Shoe Institute (DSI). The licence that is awarded to qualified shoe manufacturers is held by the HDS – Federation of German Footwear Industry.

WMS takes not only the length of the foot, but also the girth of the ball of the foot into consideration.

Children's shoes manufactured in accordance with WMS are characterised by an excellent fit. As well as the length, they take different girths into consideration. The WMS system distinguishes between three girths for each length: W = wide (for broad feet), M = medium (for medium-sized feet), S = small (for narrow feet). By the use of WMS foot measuring instruments, a combined size consisting of length and girth is calculated. The length of the shoe includes extra space for unrolling and space for growth.

WMS is regularly adapted to the latest results of (biomechanical) research.

The first German children's foot report summarises the results of the latest scientific foot measurement study, performed by the University of Potsdam, on more than 20,000 children's feet.

WMS shoes enable children's feet to grow healthily.

The objective of WMS is to provide fitting shoes for all children. With its precise specifications on the length, girth and point shape, WMS provides the perfect conditions for supplying the most diverse feet with the correct, fitting shoes, and avoiding damage to the feet and to health.

What benefits does WMS offer?

WMS is the quality seal for highquality children's shoes with a good fit. WMS guarantees a high quality standard for children's shoes. The natural proportions of the feet are taken into consideration, the shoe measurements are identical for all manufacturers producing according to WMS. The WMS system stands for maximum confidence and reliability amongst manufacturers, salesmen and customers. WMS has been an acknowledged, established system, working for healthy feet for more than 40 years.

WMS is based on the insole structure scheme of the German Society of Orthopaedics.

The proportional distribution of the foot is taken into consideration during the creation of WMS shoes, on the basis of the insole structure scheme of the German Society of Orthopaedics, in order to achieve an ergonomic fit.

WMS shoes have extra space for micro pushing and growth.

As well as extra space for growth, they also include extra length, because every foot micro pushes forwards a bit when walking. The length of fitting children's shoes is: foot length (standing) + space for movement + space for growth.
